CARBORUNDUM UNIVERSAL LIMITED

ABOUT US

Carborundum Universal Limited (CUMI) is part of the US\$ 9.1 billion conglomerate Murugappa Group. The company pioneered the manufacture of Coated Abrasives and Bonded Abrasives in India. In addition, we also manufacture Super Abrasives, Super Refractories, Electro Minerals, Industrial Ceramics, Ceramic Fiber and Power Tools.

CUMI manufactures the complete range of Vitrified, Resinoid and Rubber Bonded Products for various industrial applications; Cylindrical Grinding, Centerless Grinding, Surface Grinding, Face Grinding and complete range of Coated Products: Abrasive Paper, Fibre Discs, Rolls, Flap Discs, Non-Woven and Flap Wheels.

Our products address various type of industries: Automobile OEM, Auto Components, Steel, Bearing and roll elements, Foundry, General Engineering, Aerospace.

CUMI's strong R&D and Application support team provide complete grinding system engineering and technical support to customers. With strategic global alliances, state of the art manufacturing facilities and sales support that span across North America, Europe, Russia, South Africa, India, China, Australia, Japan, Korea. CUMI has achieved a reputation for quality and innovation.

CUMI specializes and develops specific products to meet the requirements of customers and markets.

BONDED ABRASIVES

About Bonded Abrasives

Bonded abrasives is a terminology collectively used for a range of abrasive products where abrasive grains are held together by bonding materials moulded into various shapes like grinding wheels, segments, dressing sticks, mounted points etc.,

Grinding wheel is a multi point cutting tool composed of abrasive grains held together by bonding material (bond) and separated by voids. The abrasive grains provide the cutting points, which in turn helps in cutting the material to the required dimensional accuracy or help impart a fine surface finish. The arrangement of the abrasive grains and the bond in the grinding wheels gives a specific volume of pores know as 'structure'. These pores are designed based on application needs and provide chip clearance.

The major types of grinding are

(a) Precision Grinding (b) Non-Precision Grinding or Offhand Grinding

With latest developments in technology, we at CUMI pride ourselves in being one of the top manufacturers in the world for both precision and non-precision grinding applications. Our range of grinding wheels are used for various grinding applications that include Ball Grinding & Lapping, Crankshaft & Camshaft Grinding, Gear Grinding, Centerless Grinding, Cylindrical Grinding, Creep Feed Grinding, Thread Grinding, Flute Grinding, Roll Grinding, Bore Grinding, Track Grinding, Face Grinding and Surface Grinding.

UNDERSTANDING THE NOMENCLATURE

CUMI BONDED ABRASIVES MARKING

A	46	3	L	5	V2016	/45
ABRASIVES TYPE	GRIT SIZE	GRIT COMBINATION	HARDNESS	STRUCTURE	BOND SYSTEM	WHEEL SPEED

ABRASIVES GRAINS

A	46	3	L	5	V2016	/45
----------	-----------	----------	----------	----------	--------------	------------

An Abrasive is a mineral crystal with hardness much higher than that of work piece. An Abrasive grain cuts into the work until it becomes dull. Then it breaks down (fractures) and exposes new cutting edges.

The principle properties to be considered when choosing an abrasive are as follows:

- **HARDNESS** - Resistance to Penetration
- **TOUGHNESS** - Ability to Withstand Load
- **FRIABILITY** - Ability to Fracture Under Load
- **THERMAL CONDUCTIVITY** - Ability to Conduct Heat

GRAIN TYPE	CODE	PROPERTIES & APPLICATIONS
Brown Aluminium Oxide	A	Tough Grain for High Tensile Strength Materials
Semi Friable Aluminium Oxide	SA	Free Cutting Grain with Good form Holding for Complete Range of Steels
White Aluminium Oxide	AA	Pure Aluminium Oxide for Hardened or High Speed Steels
Premium Aluminum Oxide	9A	Free cutting with better form holding for a competitive range of sheets
Pink Aluminium Oxide	RA	Friable Grain for Alloyed and Chromium Based Materials
Pink Aluminium Oxide Blend	RAA	Combination of Pink and White Aluminium Oxide Grains for Added Advantage
Ruby Pink Aluminium Oxide	24R	Tough Pink Grain for Improved form Retention
Brown and White Aluminium Oxide Blend	DA	Combination of White and Brown Aluminium Oxide Grains for Dual Advantage
Friable Aluminium Oxide	SBA	Friable Grain for Improved Dressing
Pure Aluminium Oxide	12A	Premium Grain for High Performance
Premium Aluminium Oxide Blend	65A	For Best All Round Performance in Cylindrical Applications
Sharp Premium Aluminium Oxide Blend	50A, 50MA, 53MA	Sharp and Pure Aluminium Oxide Grains for Grinding Hard Materials
Sharp Crystal Aluminium Oxide	70A	Sharp Crystalline Grain Combination of Premium Performance on all Materials
Micro Crystalline Grains	CUMISA	Sharp Ceramic Grain for High MRR & GR Requirements
Micro Crystalline Grains	CSA	Sharp ceramic grains with very good MRR and GR
Micro Crystalline Grains	CN	Sharp ceramic grains for superior performance requirements
Micro Crystalline Grains	CE	Sharp ceramic grains for very high MRR
Black Silicon Carbide	C	Hard and Friable Grain for Non Ferrous Material, Cast Iron and Stainless Steel
Green Silicon Carbide	GC	Hard and Friable Grain for Per Grinding Cemented Carbide Tools, Hard Chilled Cast Iron Rolls etc
Silicon Carbide Blend	CGC	Combination of C & GC
Silicon Carbide and Aluminium Oxide Blend	CA	Combination of Aluminium Oxide & Silicon Carbide for Alloy Steel and Stainless Steel
Zirconia Alumina	AZA	Alumina Zirconia Alloy - Hard & Tough Grain for Very High Performance

GRIT SIZE

A	46	3	L	5	V2016	/45
---	-----------	---	---	---	-------	-----

The size of the abrasive is expressed by the size of the screen opening through which the grains are shifted or sorted. For instance. A grain or grit which goes through a screen 8 mesh or openings per linear inch is called 8 grain or grit size, while a 24 grit size, while a 24 grit size is roughly twenty fourth of an inch across. The higher the grit size, the finer its type.

30 Grit	.0232" Square Hole
60 Grit	.0098" Square Hole
120 Grit	.0035" Square Hole

Grading of Abrasives

GRIT COMBINATION

A	46	3	L	5	V2016	/45
---	----	----------	---	---	-------	-----

- Combination of Different Grit sizes in Predetermined Percentages
- Ex. A463 L5 V10 - Combination of 46, 54 & 60 Grits. Primary Grit 46 will be at Higher Percentage.

GRADE HARDNESS

A	46	3	L	5	V2016	/45
---	----	---	----------	---	-------	-----

Grade Hardness is the volume of the bond present in the wheel.

For a wheel of a particular bond type, the amount of bond used in the wheel mainly determines its hardness. When the amount of bond is increased, the size of the bond posts connecting each abrasive grain to its neighbours is also increased. The larger bond post is naturally stronger, thereby increasing the wheel's hardness.

Grade hardness is therefore not a measure of the hardness of the abrasive, but of the durability of the wheel. A hard abrasive can be bonded into a soft, free cutting wheel by using less bond, while an increase in the amount of bond can make the wheel act harder. Wheel grading range from D for the softest, to Z+ for the hardest.

STRUCTURE

A	46	3	L	5	V2016	/45
---	----	---	---	----------	-------	-----

Structure is an indication of the abrasive grains in a wheel. This is defined by the voids or spaces between the abrasive grain and the bonding material and is called wheel porosity. A close structured wheel is one, where the volume of closely packed grains are more. These are given structured numbers of 1 and 2. Conversely. Open structure wheels are those with wider grain spacing.

Dense Spacing

Medium Spacing

Open Spacing

Spacing of abrasive measured in volume of abrasive particles - higher the number, more porous the wheel structure.

5 = Normal Porosity, 3 = Dense, 7 = Porous

DESCRIPTION	OPEN STRUCTURE	CLOSED STRUCTURE
Material Removal Rate	High	Low
Grinding Ratio	Low	High
Area / Arc of Contact	High	Low
Severity of Operation	High	Low
Form Holding	Poor	Good
Wheel Speed	Low	High
Type of Operation	High Stock Removal, Creep Feed	Normal Stock Removal
Thermal Conductivity of Work Material	Low	High

BOND

A	46	3	L	5	V2016	/45
---	----	---	---	---	--------------	-----

VIRITIFIED BOND	RESINOID BOND	RUBBER BOND (R)
Glassy Bond Made of ingredients available Naturally	Made of phenolic thermo setting resins	Made of Natural / Synthetic Rubber
Very Brittle	Very Resilient - Can withstand Shock Loads	Batter Resilliency - Can withstand Shock Loads
Water, Chemical Resistance	Low Water, Chemical Resistance	Water, Chemical Resistance
Very Good for Retention	Good Form Retention	Good form Retention
No Restriction Shelf Life	Shelf life 1 - 2 years	No Restriction Shelf Life
Severity of Operation - Low	Severity of Operation - High	Severity of Operation - High
For Wheel Speeds upto 80 meters per sec	For Wheel Speeds upto 80 meters per sec	For Wheel Speed upto 45 meters per sec
Application for almost any kind of application	Gives cool cutting and is more suitable for application with high area of contact, High Material Removal Rate.	For applications where very fine surface finish is required

WHEELS SPEED

A	46	3	L	5	V2016	/45
---	----	---	---	---	-------	------------

Effect of wheel and work speed on grinding action

SPEED	INCREASED	DECREASED
Wheel speed	Harder	Softer
Work speed	Softer	Harder
Traverse speed	Softer	Harder
Infeed rate	Softer	Harder

WHEEL SPEED	COLOR BAND

80 mps	Red Band
100 mps	Green Band

WHEEL SELECTION

CUMI has one of the widest range of grinding wheels in the world. Available in standard size or customized to specific grinding requirements, these premier quality wheels are manufactured to suit the varied grinding needs of all user. Since there are as many types of wheels as there are grinding applications, correct wheel usage assumes very critical importance.

FACTORS AFFECTING THE SELECTION OF A GRINDING WHEEL

Wheel selection is dependent type of material to be ground and the type of grinding operation. The eight important factors that need to be considered in the selection of a grinding wheel are

1. Material to be ground and its hardness
2. Stock removal and surface finish
3. The grinding process-whether wet or dry
4. Peripheral speed of the wheel
5. The area of grinding contact-large or small
6. The severity of grinding operation
7. Condition of grinding machine
8. Type of grinding machine

STANDARD GRINDING WHEEL SHAPES

STRAIGHT WHEELS

Type 1, 5 & 7 wheels are standard for internal grinding, cylindrical grinding, tool grinding, off hand grinding and snagging. The recess in type NOs. 5 and 7 gives clearance for the mounting flanges.

STANDARD GRINDING WHEEL SHAPES

TAPERED WHEELS

Type 4 wheels, is a modification on Type 1 wheel having a taper on both sides and is used principally in snagging operation. Tapered wheels with tapered mounting flanges are a safety device to prevent pieces of the wheel from flying out should the wheel break in operation.

CYLINDER WHEELS

Type 2 wheels is used for surface grinding on both horizontal and vertical spindle machines with the grinding performed on the face of the wheel

STRAIGHT CUP WHEELS

Type 6 wheel is a straight cup wheel and is used primarily for surface grinding on horizontal or vertical spindle machines. It is also useful for off-hand grinding in order to generate a flat surface. Available in either plain or bevel face.

FLARING CUP WHEELS

Type 11 wheel is a flaring cup wheel used for grinding various surfaces requiring flatness. It is supplied with either a plain or bevelled face.

DISH WHEELS

Type 12 wheel is a dish wheel used for grinding in the tool room. Its thinness permits the insertion of the grinding edge of the wheel into narrow places.

SAUCER WHEELS

Type 13 wheel is a saucer wheel or saw gummer. Its name derived from its use for re-sharpening saws (saw gumming)

D: Diameter (overall)

E: Thickness at hole or back thickness

F: Depth of recess (see type 5 & 7)

G: Depth of recess (see type 7)

H: Hole

J: Diameter of outside flat

K: Diameter of inside flat

M : Large Diameter of bevel

P : Diameter of recess

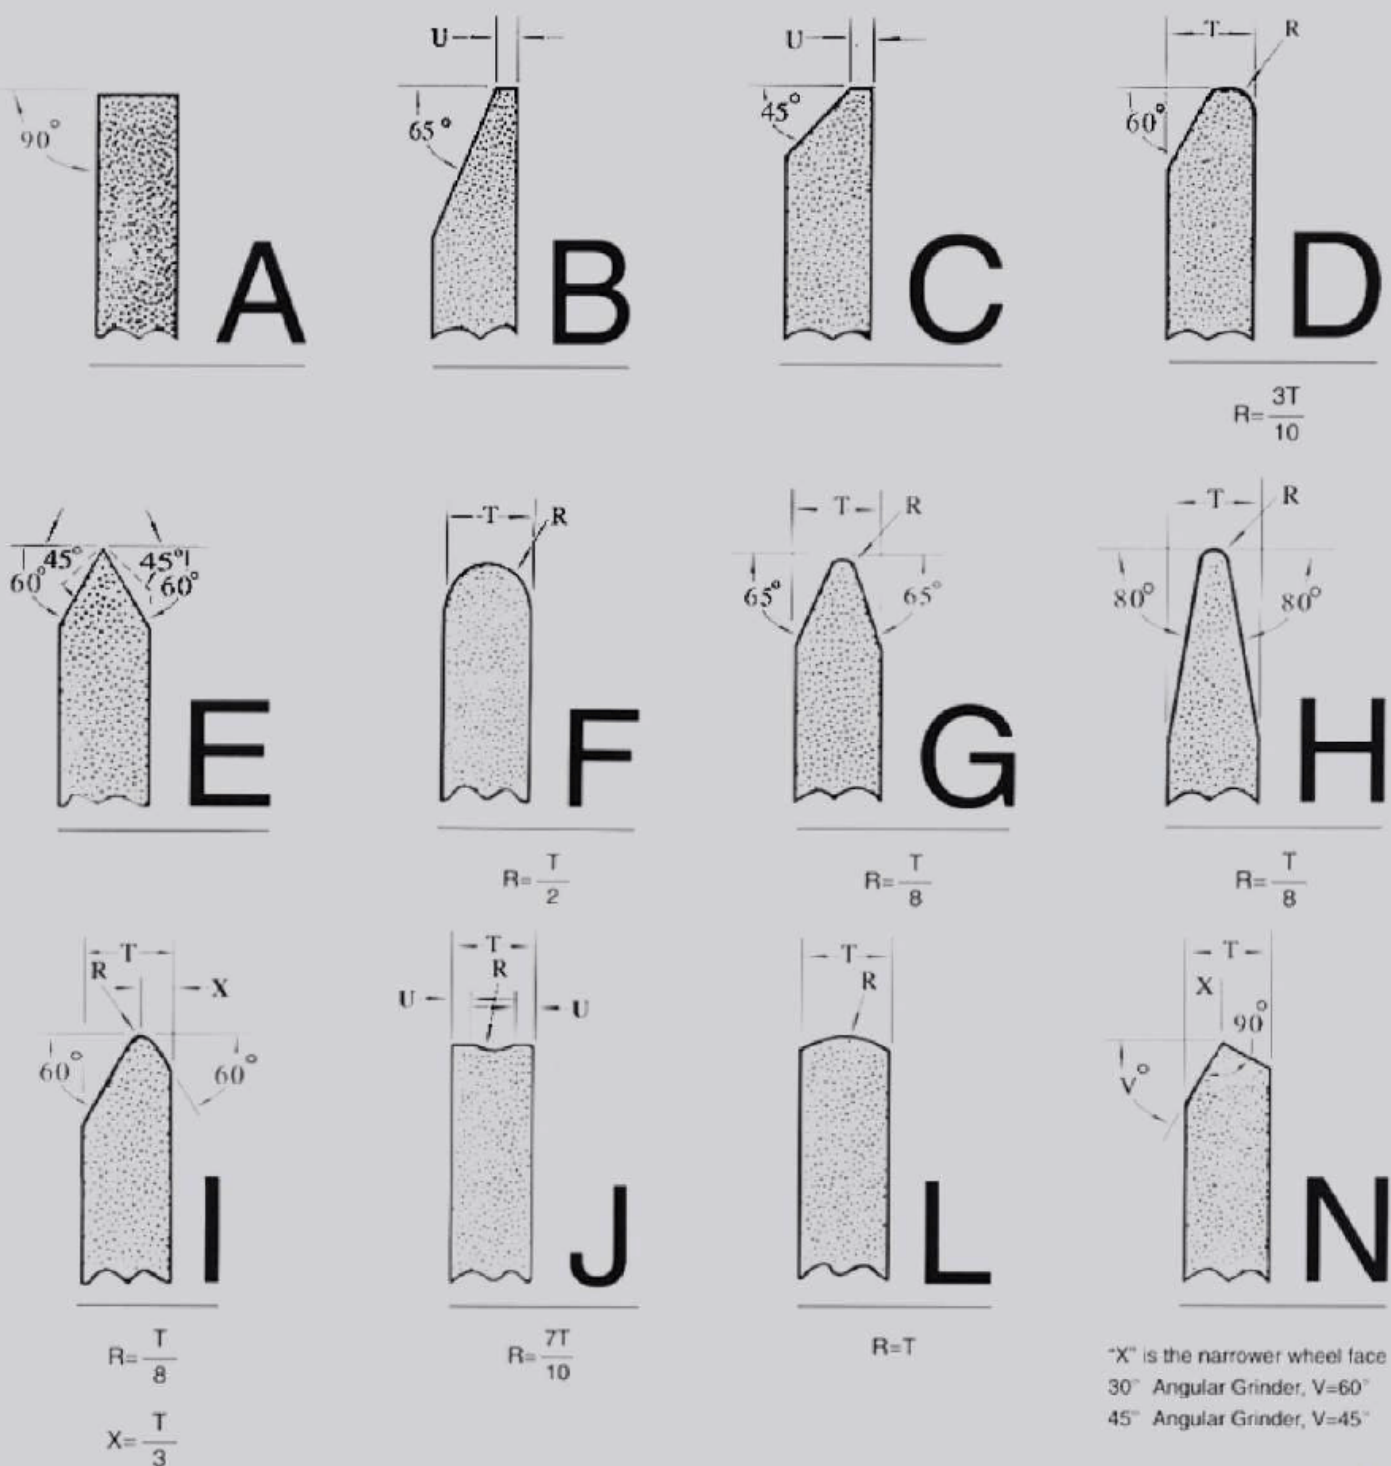

R : Radius of corner

T : Thickness (overall)

U : Width of edge

W: Wall thickness of grinding face

BONDED ABRASIVES

CENTERLESS GRINDING WHEELS

CENTERLESS GRINDING

BONDED ABRASIVES

CENTERLESS GRINDING WHEELS

ABOUT CENTERLESS GRINDING WHEELS

An application which presents the most daunting challenges to any abrasive manufacturer. The range of requirements and priorities of this application varies from product to product which calls for an equally wide range of offerings to suit the same. Since in most of the Centerless applications, more than one wheel is mounted on the spindle, extremely tight tolerances need to be maintained in the geometry and densities of the wheels to ensure uniform wear patterns even if each wheel in the set is different.

CUMI has the expertise, when it comes to Centerless applications thanks to the advanced manufacturing process, premium Abrasive grains and specially designed Vitrified, Resin and Rubber bond systems to suit the application needs. Customized solutions are provided for every application and specific requirement. Be it through-feed, end-feed or in-feed, CUMI wheels ensure that components are finished to stringent quality requirements.

FEATURES:

- Unique set of combination wheels for higher stock removal, good surface roughness and higher productivity
- Unique grain combination for specific application
- Cork bond for superior surface roughness & luster
- Wide range of bond system to customize individual grinding needs

CENTERLESS GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. High stock removal
2. Lower dressing frequency
3. Burn free component
4. Better productivity
5. Excellent surface finish

FEED/REGULATING WHEELS

ABOUT FEED/REGULATING WHEELS

CUMI's regulating wheels are the best in class in the world. These wheels are made using a distinct calendaring process, leading to superlative & consistent performance making it as the most preferred product in the industry. The controlled wear not only leads to highly precise components but also gives longer life.

FEATURES:

- Tough grains for long life
- Resilient rubber for better finish

CYLINDRICAL GRINDING WHEELS

ABOUT CYLINDRICAL GRINDING WHEELS

CUMI's versatile range of cylindrical wheels are used for a variety of grinding operations that require size generation, fine surface finish and fast stock removal. Special wheels are also available for multiple diameters and shoulder grinding with pre-formed wheel faces.

CUMI's cylindrical grinding wheels find wide application in the grinding of valves, plunger pins, eye bolts, transmission shafts, cam shafts, crank shafts etc.,

FEATURES:

- Best choice of abrasive grain wheels for higher stock removal, higher productivity and form retention
- Customizes sketches for every customer requirement
- Wide range of bond system to customize individual grinding needs

CYLINDRICAL GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. High stock removal
2. Better productivity
3. Excellent surface finish
4. Lower dressing frequency
5. Burn free component

CRANKSHAFT GRINDING WHEELS

CRANKSHAFT GRINDING WHEELS

ABOUT CRANKSHAFT GRINDING WHEELS

What sets Crankshaft grinding apart from the other cylindrical grinding process is the extremely crucial function of the crankshaft in itself. Crankshaft design requires meticulous attention from material selection to the various hardening processes. Each part of the crankshaft is designed to have different hardness meeting specific demands of the application. Grinding of the shoulder region is a surface grinding operation, while the grinding of the pin is a cylindrical grinding operation. This poses a great challenge in designing a wheel that performs both these processes efficiently.

With the incorporation of the latest advances in Abrasive grains and Vitrified bond technology, CUMI provides Crankshaft grinding wheels that can face each of these challenges. The basic composition of the wheels are designed to give maximum life and excellent form holding while physical forms like slotted wheels, sandwich wheels, dual grade wheels etc. enable the wheels to grind without burns.

FEATURES:

- Sharp & friable aluminium oxide grains
- Low temperature fired fusible vitrified bond system
- Uniform density and hardness across wheel diameter
- Perfectly balanced
- Sandwich option for higher feed rates & improved form holding

CRANKSHAFT GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. Lower BV (Barkhausenvalue)
2. Lower dressing depth
3. No surface cracks
4. Lower cost per component
5. Good form retention
(for better radius profile)

CAMSHAFT GRINDING WHEELS

ABOUT CAMSHAFT GRINDING WHEELS

CUMI'S Camshaft wheels offer good form holding, free cutting ability while maintaining the stringent geometrical and surface finish requirement to maintain consistent and tight surface finish tolerances. CUMI's versatile camshaft wheels can grind materials like forged steel and chilled cast iron with highest amount of stock removal without thermal damage on the cam flank.

CUMI also offers single wheel for both roughing and finishing operations

FEATURES:

- Sharp & friable Aluminium Oxide grains
- Vitrified Krystal bond system(V500)
- Uniform density and hardness across wheel diameter
- Perfectly balanced

CAMSHAFT GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. High productivity
2. Excellent form retention
3. Dimensional accuracy
4. Surface finish
5. Form accuracy

F TYPE GRINDING

BONDED ABRASIVES

F TYPE GRINDING WHEELS

ABOUT F TYPE GRINDING WHEELS (DOUBLE DISC)

F type wheels or Fastening type wheels are resinoid wheels which are fastened to the back plates using bolts. The face of the wheel is used to grind components and generate flat and parallel surfaces. Used in various industries like Bearings, Auto etc. The applications usually demand high stock removal along with tight size tolerances and fine surface finishes. Since the area of grinding is very large, heat generation is high, provisions are made in the chemical and physical design of the wheel to ensure that there is enough scope for heat dissipation by effective utilization of coolants.

CUMI wheels are proven to perform at high feed rates and material removal applications while meeting stringent quality requirements in terms of size tolerances, heat generation and surface finishes, thanks to the special technology of grain-bond combination, which ensures free cutting. Physical features like coolant slots, through holes and honeycomb structure aid in taking the performance of the wheels to the next level.

FEATURES:

- Wide range of bonds including phenolic and Epoxy
- Huge variety of high performance products using Aluminium oxide, Silicon carbide, micro-crystalline and mono crystalline grains
- Engineered design modifications comprising honey comb, slots

F TYPE GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. Free cutting action
2. Less dressing intervention
3. Good surface finish
4. Excellent feed rate
5. Excellent part geometry

BORE GRINDING WHEELS

ABOUT BORE GRINDING WHEELS

Internal or Bore Grinding wheels are used for grinding inner diameter of bearing, gears & automobile components to an accurate size & desired finish.

CUMI's versatile range of bore grinding wheels are used for grinding a variety of components that require size generation, fine surface finish and fast stock removal. We also offer value added services like Special treatment for lubrication & cooler cutting action.

FEATURES:

- Sharp aluminium oxide grains for excellent cutting action
- Krystal bond for form holding(V500)
- Available in various shapes

BORE GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. Good form retention
2. Excellent surface finish
3. Less dressing intervention
4. Reduced cycle time
5. Burn free surface

IR TRACK GRINDING WHEELS

ABOUT IR TRACKING WHEELS

With all the latest advancements in the field of automobiles and machine manufacturers, the functions of bearings are now more crucial than ever before, thereby placing greater demands on quality of bearings.

Track grinding wheels must maintain form to ensure profile accuracy of the track of inner ring. This ensures that the wheels are dressed less often, leading to significant improvement in productivity and consistency of the process.

CUMI's Track grinding wheels are made with a special fusible glassy bond with sharp abrasive grain combination that ensures form holding while offering high material removal rates in a high contact area application. An advanced manufacturing process ensures that the wheel's hardness is consistent through the wheel life and highest levels of safety are maintained.

FEATURES:

- Sharp crystal aluminium oxide grains
- Krystal bond for form holding & Safety
- Customized profiling as per requirement

IR TRACK GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. Profile holding & form retention
2. Less dressing intervention
3. Burn free component
4. Surface finish (0.3-0.4 Ra)
5. Roundness (<math><5Q</math>)

THREAD GRINDING WHEELS

ABOUT THREAD GRINDING WHEELS

Being a high speed, high material removal application with stringent demands on the thread profile, generating threads on taps and drills by grinding isn't an easy job.

CUMI's Thread grinding wheels are formulated with high purity, Sharp Aluminium Oxide grains combined with a special glassy, fusible bond. This ensures excellent form retention of the wheel, which translates into consistent thread profile of components.

FEATURES OF THREAD GRINDING WHEELS

- Hi performance hard, sharp & friable Aluminium Oxide abrasive blend
- Fusible, glassy crystalline bond for improved form holding
- Special manufacturing process for uniform hardness across diameter

FEATURES OF THREAD ROLL DIE GRINDING WHEELS

- High purity closely graded Green Silicon Carbide micro grits
- Special Low temperature fired Vitrified bond for improved form holding
- Special manufacturing process for uniform hardness across wheel thickness

THREAD GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. Excellent form holding leading to reduced dressing
2. Low grinding forces
3. Minimal thermal load/
No burns on the taps
4. Lower cycle time
5. Higher wheel life

FLUTE GRINDING

BONDED ABRASIVES

FLUTE GRINDING WHEELS

ABOUT FLUTE GRINDING

Being a high depth of cut, form generating grinding process, Flute grinding operations are at high speeds and remove material at rates comparable to machining process rather than grinding. A combination of peripheral and surface grinding actions, the depth of cut, width of cut, form retention and surface finish are crucial parameters.

CUMI Flute grinding wheels are specially engineered high density (near zero porosity), resin bonded wheels which ensure that the form is generated with utmost precision and finesse. These wheels truly are a testament to the expertise that CUMI has built over the years.

FEATURES:

- Special phenolic resin
- Specially treated aluminium oxide grains for higher depth of cut
- Micro crystalline grain for lesser dressing frequency
- Unique manufacturing process for high density packing

FLUTE GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. High depth of cut
2. Higher wheel life
3. Better form holding/
reduced dressing
4. Smoke free grinding
5. Burn free components

BALL GRINDING & LAPPING WHEELS

BALL GRINDING & LAPPING WHEELS

ABOUT BALL GRINDING & LAPPING WHEELS

The demands expected of balls in the Bearing industry have become highly stringent in terms of quality in the recent years. The primary objective of a ball manufacturer is to constantly improve quality of the balls, in terms of sphericity (roundness) and surface finish, while reducing the overall manufacturing cost.

CUMI provides best-in-class ball finishing solutions, customized to meet the exacting demands and ensure that premium quality balls are produced. Be it the High Density Vitrified wheels for Grinding or the Micro grit Resinoid wheels for Lapping, CUMI has got it all. The state of the art manufacturing facility ensures that every wheel produced meets stringent quality norms.

FEATURES

BALL GRINDING

- Conditioned and specially treated raw materials
- Unique bond system for defect free surface
- Specially controlled process for ensuring consistency (layer to layer & wheel to wheel)

BALL LAPPING

- Closely graded aluminium oxide grain for superior surface quality
- Unique hot press technology for ensuring consistency
- Modified resins to achieve high material removal rate and low wheel wear

BALL GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. Faster cycle time
2. Consistent quality layer to layer
3. Longer wheel life
4. Superior ball quality
5. Overall low abrasive cost per ball

CREEP-FEED GRINDING

BONDED ABRASIVES

CREEP-FEED GRINDING WHEELS

ABOUT CREEP-FEED GRINDING WHEELS

Very high grinding allowances, and at the same time, superior surface finish requirements on the components; Although easy to describe, what is challenging in this application is the ability to maintain form, size and finish produced by the wheels while removing very high amount of stock.

CUMI offers Creep-feed grinding wheels which are designed to perform well in high material removal operations without compromise on the form and finish. Be it continuous dressing or conventional intermediate dressing, when it comes to Creep-feed grinding, CUMI wheels achieve reduced dressing by superior form holding while removing material at high feed rates.

FEATURES

- Free cutting abrasives
- Fusible, glassy bond for improved form holding
- Uniform large open pores for coolant flooding
- Advanced moulding technique for uniform mass distribution

CREEP-FEED GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. High feed rates for faster cycle time
2. Controlled wear and longer wheel life
3. Burn free surface
4. Easy on the Dressing roll
5. Good form holding leading to good geometry and dressing

GEAR GRINDING WHEELS

ABOUT GEAR GRINDING WHEELS

One of the most advanced grinding applications, the sheer amount of parameters that are measured/controlled during the grinding of gears poses enough of a challenge to give abrasive manufacturers a run for their money. Intricate profile accuracy while maintaining high Material removal rates (Q') and Dressing frequency (V') are the major requirements in this application.

CUMI's Specially designed sharp crystalline grain combination and Krystal bond systems enable us to predict wheel wear patterns and thereby modify our wheels to ensure that the necessary profile and surface roughness is achieved consistently while maintaining low cycle times. While the combination ensures performance, our world class manufacturing set up makes sure that all the varieties of gear grinding like single rib, multi rib, bevel etc. are covered.

FEATURES

- Fusible, glassy crystalline bond for improved form holding
- Special filling, pressing and sintering process for uniform hardness across width
- High precision CNC profiling of wheel and inspection

GEAR GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. Burn free surface
2. High volume metric removal
3. Reduced dress depth and frequency
4. Good form holding for profile accuracy
5. Controlled wear and highly consistent performance throughout working life

ROLL GRINDING WHEELS

ABOUT ROLL GRINDING WHEELS

Although a simple cylindrical grinding application, what makes Roll grinding challenging is the volume of stock removed from rolls, which are difficult to grind. The length of roll also provides a challenge for the wheel to retain its size and form during the traverse grinding process. Maintaining high grinding ratios/ roll reduction values is crucial in these applications, as they have a direct effect on the overall cost and cycle time.

CUMI Roll Grinding wheels combine the latest developments in resin bond technology along with suitable grain combination to give the optimal balance between cutting action and wheel life without compromising on the quality parameters.

FEATURES

- Hi performance Microcrystalline abrasive blended with Silicon Carbide grains
- Special phenolic resins for high wear resistance
- Modular manufacturing facility
- Controlled curing process

ROLL GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS

1. High feed rates for faster cycle times
2. Controlled wear (High Grinding ratios)
3. Excellent surface quality
4. Spiral & Scratch free finish for Cold rolling applications
5. Consistent performance throughout working life

SNAGGING / FETTLING WHEELS

ABOUT SNAGGING / FETTLING WHEELS

One of the roughest and toughest applications in the industry, snagging operations focus primarily on the material removal rates. With high wheel speeds and manual grinding involved, the product design calls for robustness that gives utmost safety while addressing the material removal requirements of the user.

CUMI wheels stand up to this tough task, thanks to a rugged combination of specially formulated resins and toughened grains. The reinforced bores ensure that the product is extremely safety use in spite of the rugged nature of the applications

FEATURES:

- Rounded, tough abrasives
- Strong and tough resin bond for durability
- Grinding aids for cool cutting
- High accuracy finishing of wheels for better geometry

SNAGGING WHEELS

ADVANTAGES OF CUMI WHEELS

1. Excellent cutting action
2. Higher productivity
3. Controlled wear and longer wheel life
4. Burn free surface
5. Unparalleled safety

CUP WHEEL GRINDING

ABOUT CUP WHEEL GRINDING

CUMI's Cup wheels are designed for grinding of stone and welded joints of metal by means of portable grinders.

Available in both straight and tapered shapes, CUMI's Cup wheels are available in a wide range of grit sizes from Grit 16 to Grit 220 to meet all grinding / finishing needs.

FEATURES:

- Threaded nut insert for easy mounting
- High strength phenolic resin for better safety
- Unique grinding aids for cooler cutting action
- Advanced manufacturing facility for better control of geometry and wheel vibration
- High performance zirconia grains for heavy duty grinding

CUP WHEEL GRINDING

TOOL ROOM GRINDING WHEELS

ABOUT TOOL ROOM GRINDING WHEELS

Tool room grinding wheels find vast applications in the manufacture and regrinding of cutting tools like drills, reamers, milling cutters etc.,

CUMI's tool room wheels are available in like plain wheels (type 1), cup wheels (type 6 & 11), dish wheels (type 12), saucer wheels (type 13). They are available in both dry and wet grinding applications

FEATURES:

- Right choice of abrasive grain for specific materials
- Unique bond system for cool grinding and wheel form retention

TOOL ROOM GRINDING WHEELS

ADVANTAGES OF CUMI WHEELS
